

USE OF IV EMULSIONS WITH DIFFERENT TRIGLYCERIDE  
COMPOSITION, PARTICLE SIZE AND APOLIPOPROTEIN E FOR  
TARGETED TISSUE DELIVERY OF HYDROPHOBIC COMPOUNDS

5 Abstract

This invention provides compositions in the form of emulsions comprising pharmaceutical agents, triglycerides and emulsifiers. This invention also provides methods for delivering pharmaceutical agents to predetermined tissues comprising administering the instant compositions. This invention also provides methods of making the instant compositions.
